DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1, 2, 4-9, and 41-44, drawn to a soybean meal or germ, classified in class 426, subclass 634.
 - II. Claim 3, drawn to a soybean oil, classified in class 426, subclass 634.
 - III. Claims 10-36 and 40, drawn to a method of separating soybean into different components, classified in class 426, subclass 481.
 - IV. Claims 37-39, drawn to an apparatus for processing soybean, classified in class 99, subclass 568.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions, each of inventions I, II, and III are separate components of soybean.
3. Inventions III and I-II are related as process of making and products made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the products may be produced by a process

Art Unit: 1761

wherein the soybean is cracked, dehulled, ground and prepared into a slurry, oil is centrifuged off along with further separation of oil during preparation of a pressed cake of the remaining material.

4. Inventions IV and I-II are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case the products may be prepared by using a cracking/dehulling device, a slurry tank, slurry pump, centrifuge for separation of oil and extruder for preparing a press cake and removing additional oil.

5. Inventions III and IV are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus may be used to process other oil-bearing seeds. Moreover, the process as claimed can be practiced by using an apparatus having only one cracking machine wherein streams are recycled to facilitate the second cracking step.

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
